Thirteenth meeting of the Contracting Parties to the Convention on Cooperation for the Protection, Management and Development of the Marine Environment and Coastal Areas of the Atlantic Coast of the West, Central and Southern African Region (Abidjan Convention)

Abidjan, Côte d’Ivoire, 13th to 15th December 2021

PROTOCOL ON ENVIRONMENTAL NORMS AND STANDARDS FOR OFFSHORE OIL AND GAS EXPLORATION AND EXPLOITATION
1. The Conference of Plenipotentiaries was convened by the Executive Secretary of UN Environment in pursuance of Article 18 of the Convention in its paragraphs 1 and 2 and Decisions CP.12 / 4, CP.12 / 5 and CP.12 / 6 of the Twelfth Conference of the Contracting Parties held in Abidjan from March 27 to 31, 2017. They both invited governments "... to expressly request the secretariat to hold the meeting of plenipotentiaries as soon as possible for adoption and signature of protocols ...".

2. Article 18 of the Convention, paragraphs 1 and 2, provides that "the Contracting Parties, at a Plenipotentiary Conference, may adopt additional protocols to the Convention in accordance with paragraph 2 of Article 4. A conference of plenipotentiaries shall be convened for the purpose of adopting additional protocols by the Organization at the request of not less than two thirds of the Contracting Parties."

3. At the kind invitation of the Government of the Republic of Côte d’Ivoire, the Conference of Plenipotentiaries of the Contracting Parties to the Abidjan Convention met on 2 July 2019.

4. The following Contracting Parties to the Abidjan Convention were invited to take part in the Conference: Angola, Benin, Cameroon, Côte d’Ivoire, Democratic Republic of Congo, Gabon, Gambia, Ghana, Guinea, Guinea Bissau, Liberia, Mauritania, Namibia, Nigeria, Republic of Congo, Senegal, Sierra Leone, South Africa and Togo.

5. The following Contracting Parties to the Abidjan Convention attended and participated in the Conference: Angola, Benin, Côte d’Ivoire, Democratic Republic of Congo, Gabon, Gambia, Ghana, Guinea, Guinea Bissau, Liberia, Mauritania, Nigeria, Republic of Congo, Senegal, Sierra Leone and Togo.

6. The list of non-signatories of the Abidjan Convention, United Nations agencies, Specialized Agencies, Intergovernmental Organizations and Technical and Financial Partners of the Abidjan Convention who took part in the Conference as observers is attached as Annex II to this Final Act.

7. In accordance with Article 21 (paragraphs 1 and 2) of the Rules of Procedure of the Meetings and Conferences of the Contracting Parties to the Abidjan Convention, the Bureau of CoP12 has been extended to serve as the Bureau of this Conference of the Plenipotentiaries. It is composed of the following members:

- President: Prof. Joseph SEKA SEKA (Côte d’Ivoire)
- Vice-President: Prof. Kwabena Frimpong BOATENG (Ghana)
- Dr. Denis Mounia SANDY (Sierra Leone)
- Rapporteurs: Mrs. Arlette SOUDAN NONAULT (Republic of Congo)
- Dr. Amy AMBATOBÉ NYONGOLO (Democratic Republic of Congo)
- Mr. John MUTORWA (Namibia)

8. On the basis of the provisional agenda contained in document UN Environment ABC-WACAF/ConfPlenip.2/1, the Conference adopted the following agenda:

   a) Address by the Representative of UN Environment
   b) Address by his Excellency, the Ambassador of Ghana, Vice-Chair of the Bureau
c) Address by the Representative of the Abidjan Convention Secretariat

d) Address by the Guest of Honor

e) Address of Her Excellency, Minister of Environment du Republic of Congo

f) Address by the President of CoP12 Bureau

g) Election of officials

h) Admission of observers

i) Appointment of the Committee on Credentials

j) Adoption the Rules of Procedure

k) Adoption of the agenda

l) Presentation of the ICZM protocol

m) Presentation of the mangrove protocol

n) Presentation of the LBSA protocol

o) Presentation of the Oil and Gas Protocol

p) Report of the Credentials Committee

q) Signing of the Final Act of the Conference of Plenipotentiaries for the signature of

Protocols on Pollution from Land-based Sources and Activities, Integrated Coastal Zone Management, Sustainable Management of Mangroves, Environmental norms and standards for offshore oil and gas exploration and exploitation activities

r) Closing ceremony.

9. In accordance with Rule 20 of the Rules of Procedure, the Bureau, assisted by the

Committee on Credentials, examined representatives of the Contracting Parties to the

Conference.

10. The Conference approved the recommendation of the Bureau that the credentials of the

representatives of the Contracting Parties listed in paragraph 5 above recognized as

being in due form (Annex III).

11. The Plenipotentiary Conference has been preceded by CoP12 held from 27 to 31 March

2017 in Abidjan. During this CoP12, the Contracting Parties congratulated the

Secretariat of the Convention for the brilliant conduct of the participatory and inclusive

process of elaboration of the Additional Protocol and adopted it unanimously.

12. In accordance with Article 18 (paragraph 1) of the Abidjan Convention, the

Plenipotentiary Conference, on 2 July 2019, adopted the text of the Protocol on

environmental norms and standards for offshore oil and gas exploration and exploitation activities (attached as Annex I to this Final Act).

13. At the request of Equatorial Guinea, the Plenipotentiary Conference agreed that the

Additional Protocol to the Abidjan Convention on environmental norms and standards for offshore oil and gas exploration and exploitation activities should have the usual name of PROTOCOL OF MALABO.

14. The Additional Protocol to the Abidjan Convention on environmental norms and

standards for offshore oil and gas exploration and exploitation activities is open for

signature from the second day of July 2019 until the first day of July 2021 with the

Depositary in the City of Côte d’Ivoire.

15. The Conference urge the Contracting Parties to expedite the process of signing,

ratification, acceptance or approval, or accession, as the case may be, of the Protocol.
16. The Conference urge the Contracting Parties to make the necessary provisions for implementation of the Protocol, including though legislative, institutional and policy changes, where appropriate.

17. The Conference extends its warmest congratulations and thanks to the Secretary of the Abidjan Convention, the Committee on Science and Technology, all the Expert Groups and the technical and financial partners for the quality of the work done with regard to the process of developing protocols.

18. The Conference expresses its gratitude and thanks to the Government and people of the Republic of Côte d’Ivoire for their warm hospitality and active participation in the organization of this second Plenipotentiary Conference of the Abidjan Convention. A special motion is addressed to the Head of State, Mr. Alassane Ouattara, for his personal commitment to the success of this event.

IN WITNESS WHEREOF, the representatives of the Contracting Parties to the Conference of Plenipotentiaries have signed the present Final Act.

DONE at Abidjan this second day of July, two thousand and nineteen, in two languages of English and French, both texts being equally authentic. The two original texts of the protocol as well as the final act shall be deposited with the Depository in the city of Abidjan in Côte d'Ivoire.

Annex I: Protocol on environmental norms and standards for offshore oil and gas exploration and exploitation activities

Twelfth meeting of the Contracting Parties to the Convention on Cooperation for the Protection, Management and Development of the Marine Environment and Coastal Areas of the Atlantic Coast of the West, Central and Southern African Region (Abidjan Convention)

Abidjan, Côte d’Ivoire, 27 to 31 March 2017

ADDITIONAL PROTOCOL TO THE ABIDJAN CONVENTION ON ENVIRONMENTAL NORMS AND STANDARDS FOR OFFSHORE OIL AND GAS ACTIVITIES
CONTENTS

Preamble .............................................................................................................. 4

Part I: General Provisions .................................................................................. 13
  Art 1: Definitions ............................................................................................... 13
  Art 2: Objective of the Protocol ........................................................................ 15
  Art. 3: Geographical coverage .......................................................................... 15
  Art. 4: General Commitments .......................................................................... 15
  Art. 5: Measures for effective implementation .............................................. 16

Part II: Authorizations ....................................................................................... 16
  Art 6: General Principles .................................................................................. 16
  Art 7: Applications for Permits .......................................................................... 16
  Art 8: Granting of Permits ................................................................................ 17

Part III: Environmental Impacts resulting from offshore and oil and gas exploration activities .................................................................................................................. 17
  Art 9: General obligation ................................................................................... 17
  Art 10: Harmful or Noxious Substances and Materials .................................. 17
  Art 11: Oily mixtures, Drilling fluids and Drill cuttings discharge .................. 17
  Art 12: Wastewater ........................................................................................... 18
  Art 13: Waste ..................................................................................................... 18
  Art 14: Seismic surveys ..................................................................................... 18
  Art 15: Port Reception Facilities, Instructions and Sanctions ......................... 18
  Art 16: Exceptions .............................................................................................. 18

Part IV: Safeguards ............................................................................................... 19
  Art 17: Safety and Security Measures ............................................................. 19
  Art 18: Emergency Response Plans .................................................................. 19
  Art 19: Notifications ......................................................................................... 19
  Art 20: Mutual Assistance in the event of Oil Spills ........................................ 20
  Art 21: Monitoring ............................................................................................. 20
  Art 22: Decommissioning .................................................................................. 20
  Art 23: Sensitive areas ...................................................................................... 20

Part V: Cooperation ............................................................................................. 20
  Art 24: Scientific and technical cooperation .................................................... 20
  Art 25: Internationally recommended standards, practices and procedures .... 21
  Art 26: Mutual Information Sharing .................................................................. 21
Art 27: Transboundary effects ................................................................. 21
Art 28: Liability and compensation ...................................................... 21
Part VI: Institutional and Financial Arrangements .................................. 21
  Art 29: Designation of competent authorities ...................................... 21
  Art 30: Secretariat and coordination mechanisms ................................... 22
  Art 31: Meetings .............................................................................. 23
  Art 32: Funding Mechanisms ............................................................... 23
Part VII: Final Provisions ........................................................................ 23
  Art 33: Sanctions .............................................................................. 23
  Art 34: Dispute settlement ................................................................. 24
  Art 35: Relationship to the Convention ............................................... 24
  Art 36: Relations with third parties .................................................... 24
  Article 37: Final clause ...................................................................... 24
ANNEXES ............................................................................................ 25

ANNEX I: List of Harmful or Noxious Substances and Materials prohibited from disposal in the Protocol Area ......................................................... 26
  A. The following substances and materials, and compounds derived therefrom are listed for the purposes of Article 10 (4 and 8). They have been selected mainly on the basis of their toxicity, persistence and bioaccumulation: ........................................ 26
  B. The present Annex shall not apply to discharges that contain substances listed in Part A of this Annex that are below the limits defined by the Competent Authority. ........................................ 26

ANNEX II A: List of Harmful or Noxious Substances and Materials Requiring Special Authorization for Disposal in the Protocol Area ......................................................... 27
  A. The following substances and materials, and compounds thereof have been selected for the purpose of Article 10 (5, 6, 7 and 8). ......................................................... 27
  B. The control and strict limitation of the discharge of substances referred to in Part A of this Annex must be implemented in accordance with Annex III. ........................................ 27

Annex II B: Ecotoxicological Testing and Categorization of Chemicals .......... 28
  A. Ecotoxicological Testing of Chemicals ............................................. 28
Ecotoxicological documentation in the form of OSPAR Harmonised Offshore Chemical Notification Format (HOCNF) shall exist for all chemicals used in the Protocol Area. ........................................ 28
This requirement does not apply to lubricants that are used in small amounts and chemicals in closed systems that are used in small amounts. The requirement also does not apply to laboratory chemicals, dispersants and beach-cleaning agents used to combat oil spills, and to new chemicals during the period of field-testing. ........................................ 28
Only parts 1 and 3 of the HOCNF must be completed for substances on the OSPAR List of Substances / Preparations Used and Discharged Offshore which are Considered to Pose Little or No Risk to the Environment (the PLONOR list) when reporting to the Organization. ........................................ 28
Chemicals shall be tested for the following ecotoxicological properties: ............ 28
  i. Biodegradability ........................................................................ 28
a. Chemicals that consist of several substances shall be tested for the individual organic substances' biodegradability. The substances shall preferably be tested in accordance with the seawater test OECD 306 “Biodegradability in Seawater”. If this test is not applicable for the substance to be tested, one of the following seawater tests shall be performed: ............................................................................................................................... 28
i. Marine CO2 Evolution test (mod. Sturm), modified OECD 301B .............................................. 28
ii. Marine BODIS test (for insoluble substances), modified ISO/TC 147/SC 5 N141 .............................. 28
iii. Marine CO2 Headspace test, modified ISO/TC 147/SC 5/WG 4 N182 for substances known to be toxic to microorganisms (for example, biocides), The Competent Authority must be contacted if alternative tests are planned to be used. .............................................................. 28
iv. For substances with moderate biodegradability (equivalent to BOD28 from 20 to 60%) the properties of the degradation products shall also be evaluated. ........................................... 28
ii. Bioaccumulation ........................................................................................................................................ 28
a. Chemicals that consist of several substances shall be tested for the individual organic substances' bioaccumulation potential. This requirement applies to substances with a molecular weight below 700 g/mol. The substances shall be tested according to OECD 117 “Partition Coefficient (n-octanol/water), High Performance Liquid Chromatography (HPLC) Method” or OECD 107 “Partition Coefficient (n-octanol/water): Shake Flask Method”. For substances where standardized tests are not applicable, as for surfactants, a calculation or a scientific evaluation of the bioaccumulation potential shall be performed. Scientific evaluations shall be documented and preferably be performed by an independent party. ............................................................................................................................... 28
iii. Toxicity .................................................................................................................................................. 28
ii. Scophtalamus maximus; Part B in the OSPAR Protocols on Methods for the testing of Chemicals Used in the Offshore Industry, 1995. Sheepshad minnow is accepted as an alternative species. .................................................................................................................................................. 29
iii. Corophium volutator; Part A in the OSPAR Protocols on Methods for the Testing of Chemicals Used in the Offshore Industry, 1995, required if the chemicals absorb to particles (Koc >1000) and/or sink and end up in the sediments (for example, surfactants) .......................................................... 29
b. Toxicity testing of fresh water organisms can be accepted if results from marine tests are not available, and they have been performed according to standardised methods. Organic substances that are not very prone to degrade (BOD < 20% over 28 days) shall be tested for acute toxicity at substance level. Toxicity tests, including fish tests, shall be performed at substance level for all chemicals. Fish tests are not required if the chemical is inorganic and has a toxicity to the other test organisms of EC50 or LC50 > 1 mg/l organic and a toxicity to the other test organisms of EC50 or LC50 > 10 mg/l. .......................................................... 29

B. Categorization of Chemicals .................................................................................................................... 29
Substances shall be categorized as follows: ................................................................................................. 29
1) Black category: The black category consists of chemicals on the following lists: .............................. 29
a. OSPAR List of Chemicals for Priority Action, ref. OSPAR Strategy with regard to Hazardous Substances.................................................................29

b. In addition, substances with the following ecotoxicological properties are categorized as black: .....................................................................................29

i. Substances that have both a low biodegradability (BOD28 <20%) and a high bioaccumulation potential (log Pow >5) ...........................................29

ii. Substances that have both a low biodegradability (BOD28<20%) and high acute toxicity (EC50 or LC50<10 mg/l) ..............................................29

iii. Substances that are detrimental in a mutagenic or reproductive way ..............29

2) Red category: Red category consists of substances with the following ecotoxicological properties: .................................................................................29

a. Inorganic substances which are acutely toxic (EC50 or LC50< 1 mg/l) ............29

b. Organic substances with a low biodegradability (BOD28<20%) ......................29

c. Substances that meet two of the three following criteria: ..................................29

i. Biodegradability equivalent to BOD28<60%....................................................29

ii. Bioaccumulation potential equivalent to log Pow=3 and molecular weight < 700 or29

iii. Acute toxicity of EC50 or LC50<10 mg/l............................................................29

3) Yellow category: Yellow category consists of substances that from their ecotoxicological properties shall not be categorized as red or black, and that are not defined as PLONOR substances .................................................................................29

4) Green category: Green category consists of substances on the OSPAR PLONOR list.

ANNEX III: Discharge Standards for Oily Mixtures, Drilling Fluids and Cuttings ..........30

NADF drill cuttings are subject to the following requirements: ..................................30

WBDF should satisfy the following requirements: ...................................................30

Discharges with a high oil content from the drainage systems of the processing plants and platforms shall be contained, diverted and then treated as part of the product, but the remainder shall be treated up to a maximum oil content of 15 mg per litre, while undiluted, before discharge to sea; .................................................................30

Oily waste and sludges from separation processes shall be transported to shore; ..........30

All necessary precautions shall be taken to minimize leakage of oil into the sea during production tests and from oil collected or flared from well testing; ..................30

All necessary precautions shall be taken to ensure that any gas resulting from well testing is flared or used in an appropriate manner. ........................................30

Annex IV: Environmental Assessments ...................................................................32

A. Legislation and Competent National Authority ..................................................32

B: The Objectives and Requirements of Environmental Assessments ..................32

D: General considerations .......................................................................................34

Annex V: Requirements for Issuing Permits .............................................................35

A. Authorizations for the exploration and exploitation phases ..................................35

B. Characteristics of Waste Constituents, Emissions, Discharges, Noise pollution and Discharges ........................................................................36
C. Characteristics of discharge area and receiving marine and coastal environment 36

D. Available Technologies for the Reduction of Waste, Emissions, Discharges, Noise Pollution and Spills .................................................................................................................. 36

E. Potential Impacts on Marine and Coastal Ecosystems and other Rightful Uses of the Sea .......................................................................................................................... 36

Annex VII: Emergency Response Plan ............................................................................ 39

A. The operation response plan ..................................................................................... 39

B. National coordination and leadership ....................................................................... 39

Annex VIII: Guidelines on Liability and Compensation for Damage resulting from Pollution of the Marine and Coastal Environment in the Area of the Abidjan Convention .................................................................................. 41

A. Purpose of the Guidelines ....................................................................................... 41

B. Scope of the Guidelines and Relations with other Regimes .................................... 41

C. Geographical Coverage ............................................................................................ 41

D. Implementation ......................................................................................................... 41

   Legislation .................................................................................................................. 41

   Liability ...................................................................................................................... 42

   Insurance and Oil Damage Compensation Fund ....................................................... 42

   Access to Information .............................................................................................. 43

   Review Process ......................................................................................................... 43
Preamble

The Contracting Parties to this Protocol,

Being Parties to the Convention on Cooperation for the Protection and Development of the Marine and Coastal Environment of the Atlantic Coast of West, Central and Southern African Region, signed in Abidjan on March 23, 1981,

Committed to implement the Convention, particularly in its Articles 5, 6, 8, 11, 13, 14 and 15,

Aware of the value of oil and gas resources in the economies of the Abidjan Convention's Member States and its influence on relations between its States and Third States,

Recognizing the importance of the Convention area in terms of its great and diverse productive capabilities for human settlements, industry and tourism;

Appreciating also the importance of effective and sustainable protection of the Convention area as one of the most productive marine areas in the world due to upwelling, abundant living and non-living resources as an important reservoir for marine biodiversity in view of, among other things, the wealth of estuaries, deltas and lagoons along its coastline, and as a natural heritage of great scientific, cultural, educational, social, recreational and economic value for present and future generations,

Considering the strong reliance of the coastal communities in the region on the various natural resources for their livelihoods and the potential impact of depleted living resources, deteriorated water quality, loss of critical habitats, and increased eutrophication rates and the proliferation of harmful seaweed over the lagoons, estuaries, bays and surrounding coastal waters,

Concerned that the marine and coastal ecosystems of the West, Central and Southern Africa region and their resources have suffered various impacts from the increase in unsustainable socio-economic development activities caused by man, especially on land,

Mindful of the contribution of the oil and gas industry to global warming as a current major environmental and economic issue affecting prospects for sustainable development, international commitment to address the greenhouse effect, translated in 1997 by the signing of the Kyoto Protocol of the UN Framework Convention on Climate Change and in 2015 by the signing of the Paris Agreement on Climate,

Concerned about the effects of spills, emissions, effluents, waste and runoff from the exploration and production of hydrocarbons and minerals and the physical alteration and destruction of habitats, among other factors, on human health and on the rich living resources of the marine and coastal environment of the West, Central and Southern Africa region,

Considering the various commitments and relevant international and regional instruments subscribed to by the States of the West, Central and Southern Africa region,

Noting the contribution in particular of the World Programme of Action for the Protection of the Marine Environment against Pollution from Land-based Activities (1995) on the identification of source categories such as, inter alia, municipal wastewater, heavy metals, persistent organic pollutants, litter, nutrients, hydrocarbons, radioactive substances,

Mindful of strengthening cooperation between Member States to the Convention on Cooperation for the Protection and Development of the Marine and Coastal Environment of the Atlantic Coast of the Western, Central and Southern Africa region,

Have agreed as follows:

Part I: General Provisions

Art 1: Definitions

For the purposes of this Protocol:

i) *Authorization* means any document issued by the appropriate authorities to an oil company, an oil service company (operator), granting the right to carry out an activity or activities offshore;
ii) “Coastal area” means that area between the shelf break and inland, up to the limit of tidal influence;

iii) “Competent authority” means the public authorities designated by the Contracting Parties under this Protocol and in charge of the tasks assigned to them by this Protocol. The competent authority may consist of one or more public bodies;

iv) “Continuous monitoring” means the repeated measurement:
   (a) of the quality of the marine environment and each of its components, including water, sediment and biota;

   (b) of activities or inputs, natural and anthropogenic in nature, which may affect the quality of the marine environment;

   (c) of the effects of such activities and inputs.

v) “Contracting Party” means any State in the West, Central and Southern Africa region that becomes a party to this Protocol in accordance with Articles 25 and 28 of the Convention;

vii) “Decommissioning” means the closure and sealing of wells in line with international best practices, the removal of facilities, the cleaning of the dangerous substances from the facilities, as well as the restoration of the site in accordance with national laws and oil industry international standards on the environment;

viii) “Environmental Assessment” means the process of averting, identifying, defining and assessing the direct and indirect environmental, socio-economic, health and fisheries impacts in the short, medium and long term of policies, programmes and plans, as well as development projects, and to formulate measures to eliminate, mitigate or compensate for the adverse impacts and enhance the positive impacts on the environment;

ix) “Event” within the meaning of Article 18 of this Protocol, refers to any discharge resulting in a notification obligation [under Article 8 and Protocol I of MARPOL 73/78];

x) “Facility” means any man-made structure, plant or vessel or parts thereof, fixed or floating, and placed in the maritime area for the purpose of offshore exploration or exploitation;

xi) “Garbage” refers to all types of food, domestic and operational waste generated during the normal course of oil exploration and exploitation activity and which may be disposed of continuously or periodically, except those substances that are defined or listed elsewhere in this Protocol;

xii) “Harmful or noxious substances and materials” means substances and materials of any kind, in any form or of any nature that may cause pollution if introduced into the Protocol Area;

xiii) “Offshore oil exploration or exploitation” means
   a) Exploration activities per se, namely geophysical acquisition activities, especially seismic activities, surveys of the sea bottom and its subsoil, exploratory drilling and all related offshore oil and gas operations needed before initiating operations related to exploitation;
   b) Exploitation activities per se, namely the establishment of facilities for the exploitation of resources and related activities; development drilling; extraction, processing and storage; transportation to shore by pipeline and loading of ships; maintenance, repairs, inspection and other similar auxiliary operations mainly for exploration or exploitation, including helicopter and support ship operations.

xiv) “Operator” means the entity designated by the license holder or by the authority that issues licenses for conducting offshore oil and gas operations;
xv) "Organization" means the organization named in Article 16 of the Convention to perform the
Convention's secretariat functions;

xvi) "Permit" means a document issued by the relevant authorities to an oil company or an oil service
company (operator), authorizing oil exploration and exploitation activities;

xvii) "Pollution" means the direct or indirect introduction by man of substances, organisms or energy
into the marine environment, coastal areas and related inland waters; it has deleterious effects on
biological resources and human health, is a hindrance to marine activities including fishing, and alters
the quality of sea water from the perspective of its use and degradation of amenities;

xviii) "Spill" is the release of harmful or toxic substances into the environment, especially marine and
coastal areas, due to human activity, and is a form of pollution;

xix) "Safety Area" is the area, under the provisions of general international law and technical requirements,
established around the facilities with appropriate markings to ensure the safety of facilities and of
navigation;

xx) "Sensitive area" is any geographically limited coastal or marine area that is of particular importance or
is particularly vulnerable to pollution due to the value of its biodiversity, the nature of its ecosystems,
its special ecological functions or its contribution to the economy and human well-being, and which
requires attention as well as special efforts with regard to management to avoid, mitigate or minimize
the risk associated with pollution or degradation.

xxi) "Waste" means substances and matter of any kind, in any form or of any nature, resulting from
the activities covered by this Protocol that are disposed of, intended to be disposed of or required to be
disposed of;

xxii) "Wastewater" means all waters containing a pollutant load and likely to contaminate receiving
waters;

Art. 2: Objective of the Protocol

This Protocol aims to prevent, reduce or eliminate pollution or damage to the marine and coastal
environment resulting from offshore oil and gas exploration and exploitation.

Art. 3: Geographical coverage

The present Protocol area (hereinafter referred to as "Protocol Area") corresponds to the definition
provided in Article 1 of the Convention and includes the marine environment, coastal areas and related
inland waters under the national jurisdiction of States on the Atlantic coast in the West, Central and
Southern Africa Region.

Nothing in this Protocol or any act adopted on the basis thereof shall prejudice the rights of any State
concerning the delimitation of the continental shelf.

Art. 4: General Commitments

1. The Contracting Parties shall, individually or as part of bilateral or regional cooperation, take all
appropriate measures to prevent, mitigate, combat and control pollution in the Protocol Area
resulting from offshore exploration and exploitation, and ensure, in particular, that the best
available, environmentally effective and economically appropriate techniques are implemented.

2. The Contracting Parties shall apply:

   a) The precautionary principle that preventive measures should be taken when there are
      reasonable grounds for concern that substances or energy introduced, directly or
      indirectly, into the marine environment may cause risks to human health, or grave or
      irreversible damage to living resources and marine ecosystems;

   b) The polluter pays principle, according to which the costs of pollution, preventive and
      mitigation measures and pollution control must be supported by the polluter;

   c) The principle of public participation, whereby every person has the right to participate in
      the making of public decisions that affect the environment.
3. The Contracting Parties shall implement the measures they have adopted in such a way as not to increase pollution of the sea outside the already polluted maritime area.

Art. 5: Measures for effective implementation

To effectively implement this Protocol, the Contracting Parties shall harmonize their policies and strategies and formulate and adopt programmes and measures that contain, as necessary, deadlines for implementation.

The provisions of this Protocol shall not affect the right of the Contracting Parties to take, individually or jointly, more stringent measures for the prevention and elimination of pollution in the Protocol area, or for the protection thereof.

Part II: Authorizations

Art 6: General Principles

1. All offshore oil and gas exploration and exploitation activities in the Protocol Area shall be subject to prior written authorization from the relevant competent authority. Before granting the authorization, the authority shall ensure that the proposed facilities are in compliance with international standards and practices and that the operator has the technical and financial capacity to undertake the proposed activities. It shall also ensure effective public participation at an early stage and consider the possible effects on the environment of the offshore oil and gas operations planned.

2. Authorizations shall be issued in accordance with appropriate procedures established by the relevant competent authority.

3. Authorizations shall be refused if the proposed activities are likely to cause significant adverse environmental effects that cannot be avoided despite complying with the requirements for the granting of permits provided for in Article 8, paragraph 3 of this Protocol.

4. When granting approval for selecting a site for facilities, the Contracting Party shall ensure that such a decision has no detrimental effect on existing facilities, particularly on pipelines and cables.

Art 7: Applications for Permits

1. Any application for a permit shall be subject to the filing of the proposed project by the applicant or the operator with the competent authority. The information on the project should include, but not be limited to the following:

   a) A study of the environmental impacts of the proposed activities: the relevant competent authority may, in view of the nature, extent, duration and technical methods used for the activities and depending on the environmental sensitivity of the receiving environment, require the conduct of an environmental assessment in accordance with Annex IV of this Protocol;

   b) The precise geographical definition of areas where the activity is planned, including safety areas;

   c) The professional and technical qualifications of the applicant and staff to be assigned to the facility, and the composition of the team;

   d) The safety and security measures referred to in Article 17;

   e) The operator’s emergency response plan as per Article 18;

   f) The continuous monitoring procedures as per Article 21;

   g) The measures provided for the decommissioning of facilities as per Article 22;

   h) Precautions for specific sensitive areas as per Article 23;

   i) The insurance or other financial guarantee to cover liability under Article 28, paragraph 2, subparagraph b) and dismantling, as per article 22.

2. The competent authority may decide, for scientific research and exploration activities, to limit the scope of the requirements listed in paragraph 1 of this Article depending on the nature, extent, duration of the activities, the technical processes used and the sensitivity of the receiving environment.
Art 8: Granting of Permits

1. The permits referred to in Article 6 shall be granted only after the review by the competent authority of the requirements listed in Article 7 and Annex V.

2. Permits shall specify the activities and the validity of the authorization, establish the geographical limits of the area covered by the authorization and determine the technical requirements and the authorized facilities. The Contracting Parties shall see to it that the safety areas required around a facility are set up on time.

3. The permit must impose conditions regarding measures, techniques or methods designed to reduce to a minimum the risk of pollution and related damage resulting from the activities.

4. The Contracting Parties shall notify the Organization, as soon as possible, of the permits granted or renewed. The Organization shall keep a register of all the authorized facilities in the Protocol area.

Part III: Environmental Impacts resulting from offshore and oil and gas exploration activities

Art 9: General obligation

Without prejudice to other standards or obligations referred to in this Part, the Contracting Parties shall require operators, as a general obligation, to use the best available techniques, and environmentally and economically effective practices, and to observe national and internationally accepted standards in order to mitigate the specific risks and potential impacts of pollution resulting from the exploration or exploitation of offshore oil and gas.

Art 10: Harmful or Noxious Substances and Materials

1. The use and storage of chemicals for activities shall be approved by the relevant competent authority based on a safer chemical use plan;

2. The Contracting Party shall regulate, limit or prohibit the use of chemicals for the activities in accordance with the relevant effective international norms and the applicable guidelines adopted by the Contracting Parties;

3. For the purposes of protecting the environment, the Contracting Parties shall ensure that each substance and material used for activities is accompanied by a description indicating its composition, provided by the manufacturer of that substance or material.

4. For the purpose of safety in handling, the Contracting Parties shall ensure that each chemical substance and material used for activities is accompanied by a Safety Data Sheet, indicating its composition and safe handling methods.

5. The discharge into the Protocol Area of harmful or noxious substances and materials resulting from the activities covered by this Protocol and listed in Annex I of this Protocol shall be prohibited.

6. The discharge into the Protocol Area of harmful or noxious substances and materials resulting from the activities covered by this Protocol and listed in Annex IIA of this Protocol requires, in each case, the prior granting of a special authorization by the competent authority.

7. The discharge into the Protocol Area of all other harmful or noxious substances and materials resulting from the activities covered by this Protocol and which might cause pollution shall be subject to the prior granting by the competent authority of a general authorization.

8. The authorization referred to in paragraphs 5 and 6 above shall be issued only after a thorough review of all the factors listed in Annex IIB of this Protocol. The authorizations referred to in paragraphs 6 and 7 above shall not be issued until an in-depth examination of all the factors listed in Annex B.

9. The list of harmful substances and materials whose release is prohibited in the Protocol area (Annex I) shall be reviewed whenever a given substance or material is deemed harmful to the marine environment.

Art 11: Oily mixtures, Drilling fluids and Drill cuttings discharge

1. The Contracting Parties shall formulate and adopt common standards for the discharge in the Protocol area of hydrocarbon and oily mixtures, fluids and drill cuttings from facilities, in
accordance with Annex III.

2. The Contracting Parties shall determine by common agreement the method used to analyse the oil content in produced water and drill cuttings.

3. Each Contracting Party shall take appropriate measures to enforce the common standards adopted under this section or the more restrictive standards it may have adopted.

Art 12: Wastewater

1. The Contracting Parties shall ensure compliance with international standards prohibiting the discharge into the Protocol Area of sewage from oil and gas facilities permanently manned by ten (10) or more persons, unless:
   a) The facility is discharging sewage after treatment as approved by the relevant authority at a distance of at least four nautical miles from the nearest land or permanent fishery facility. The Contracting Party shall be allowed to make decisions on a case-by-case basis; or if
   b) The wastewater is treated in an appropriate treatment plant approved by the competent authority or is discharged in accordance with Annex III.

2. The exceptions referred to in paragraph 1 shall not apply if the discharge generates floating, visible solids or results in a coloration, discoloration or opacity of the surrounding water. When the sewage is mixed with wastes or other harmful or noxious substances and materials whose disposal is subject to different conditions, the more stringent requirements shall apply.

3. The Contracting Parties shall impose, where appropriate, more stringent provisions when they deem it necessary due to, among other things, the current regime in the area or proximity to a sensitive area or vulnerable ecosystem as meant in Article 23.

Art 13: Waste

1. The Contracting Parties shall ensure compliance with the provisions of international standards, prohibiting the discharge into the Protocol Area of the articles and materials below:
   a. All plastic objects, in particular ropes and synthetic fibre, fishing nets and plastic garbage bags.
   b. All other non-biodegradable garbage, such as synthetic rags, glass items, metal object, bottles, crockery, dunnage, lining and packing materials.

2. The disposal of food waste in the Protocol Area shall take place as far as possible from the coast, pursuant to Annex III.

3. If garbage is mixed with other waste whose disposal or release is subject to different conditions, the more stringent requirements shall apply.

Art 14: Seismic surveys

The Contracting Parties shall take special measures with regard to sensitive areas and migration corridors of species in order to prevent the harmful effects of seismic surveys on the marine environment. Such measures should be taken in accordance with Annex IV.

Art 15: Port Reception Facilities, Instructions and Sanctions

The Contracting Parties shall ensure that:

(a) Port reception facilities are available
(b) Operators satisfactorily dispose of and/or recycle all wastes into authorized port reception facilities, unless otherwise agreed under this Protocol;
(c) Illegal disposal is sanctioned.

Art 16: Exceptions

1. The provisions of this Part shall not apply:
   a. in cases of force majeure and namely:
i. when human life is in danger
   ii. when the safety of facilities is endangered

b. in the event of damage to a facility or its equipment, provided all precautions are taken after the damage or following the disposal to reduce adverse effects;
c. when the discharge into the sea of substances containing oil or harmful or noxious substances or materials, subject to the prior approval of the competent authority, is done to fight against a given event in order to minimize pollution damage;

2. However, the provisions of this Part shall apply in any case where the operator acted with intent to cause damage or recklessly and with the knowledge that damage would probably ensue.

3. Any disposal made under the conditions referred to in paragraph 1 of this Article shall be immediately reported to the Organization, and any Contracting Party likely to be affected. The notification shall include, to the extent possible, full details of the circumstances and of the nature and quantity of the discharge of harmful or noxious substances or materials.

Part IV: Safeguards

Art 17: Safety and Security Measures

1. The Contracting Parties under whose jurisdiction activities are envisaged or undertaken shall ensure that safety and security measures are considered in the design, construction, installation of equipment, signalling, operation and maintenance of facilities.

2. The Contracting Parties shall ensure that the operator has permanently available on its facilities and in good condition, the appropriate equipment and protection devices for human life and all emergency situations, in line with the existing best environmental and economic techniques and pursuant to the operator’s contingency plan as per Article 18(2).

3. The competent authority shall require a certificate of safety and fitness for that purpose (hereinafter “certificate”), issued by a recognized body in the field of production platforms, mobile offshore drilling units, offshore storage facilities, offshore loading systems, subsea pipelines and other facilities that Contracting Parties may specify.

4. The Contracting Parties shall ensure through inspections that operators conduct their operations in line with the provisions of this article.

Art 18: Emergency Response Plans

1. In the case of an emergency, the Contracting Parties shall implement mutatis mutandis the provisions of the Protocol to the Abidjan Convention on Cooperation in Combating Pollution in Cases of Emergency.

2. Each Party shall ensure that the facilities operating under its jurisdiction have put in place contingency plans against pollution incidents and that these are coordinated with the contingency plan of the Contracting Party in accordance with the Protocol on Cooperation in Combating Pollution in Cases of Emergency and are approved under the procedures set forth by the relevant authority.

3. Each Contracting Party shall ensure coordination for the development and implementation of emergency response plans. Such plans are prepared in accordance with the guidelines established by the competent international organization; they will be aligned, in particular, with Annex VII to this Protocol.

Art 19: Notifications

Each Contracting Party shall ensure that operators with facilities under its jurisdiction report without delay
to the competent authority:

(a) any event occurring within or on board a facility and causing or likely to cause pollution in the Protocol Area;

(b) any event observed at sea that causes or is likely to cause pollution in the Protocol Area.

Art 20: Mutual Assistance in the event of Oil Spills

In the event of an oil spill, any Contracting Party requiring assistance to prevent, reduce or combat pollution arising from operations may request help from other Parties, either directly or through the regional or sub-regional centre for cooperation in the event of oil spills.

Art 21: Monitoring

1. The Contracting Parties shall carry out programmes to constantly monitor operators to ensure that authorization requirements are met and especially with regards to the impact of operations on the environment.
2. Where necessary, the Contracting Parties shall cooperate in carrying out monitoring programmes to constantly monitor the effects of operations on the environment.
3. The Contracting Parties shall define and implement joint research programmes on continuous monitoring and assessment of the marine and coastal environment, develop codes of practice to guide participants in carrying out such continuous monitoring programmes and approve the reporting and interpretation of their findings.
4. The Contracting Parties shall cooperate with regional organizations and relevant international organizations in carrying out assessments of the state of the marine and coastal environment.

Art 22: Decommissioning

1. The Contracting Parties shall ensure that at the end of the life of oil and gas fields, installations are decommissioned in accordance with international guidelines and standards, such as International Maritime Organization guidelines. Such decommissioning shall also consider other legitimate uses of the sea, particularly for fishing, safety of navigation, the protection of the marine and coastal environment as well as the rights and obligations of the other Contracting Parties.
2. The provisions of this Article shall also apply to facilities disposed or abandoned by any operator whose permit has been withdrawn or suspended under Article 33.

Art 23: Sensitive areas

To preserve and protect sensitive areas and especially mangrove ecosystems, coral reefs in the respect of natural balances, including fragile wetlands and the marine environment, the Contracting Parties shall, individually or through bilateral or multilateral cooperation, take special measures in compliance with international law to prevent, reduce, combat and control pollution arising from offshore oil and gas exploration and exploitation activities.

Part V: Cooperation

Art 24: Scientific and technical cooperation

1. In accordance with Article 14 of the Convention, the Contracting Parties shall, as appropriate, promote studies and undertake scientific and technological research programmes to develop new methods for:
   a) increasing knowledge on habitats and resources;
   b) carrying out activities to minimize pollution risks;
   c) preventing, reducing, combating and controlling pollution, especially in emergencies.
2. The Contracting Parties shall cooperate, with the assistance of competent regional and international organizations in the field of technology transfer, technical support in the acquisition, maintenance and production of the required equipment and facilities, training focused on strengthening capacity of scientific and technical staff, monitoring and evaluation under this Protocol.
Art 25: Internationally recommended standards, practices and procedures

1. The Contracting Parties shall cooperate, directly or through the Organization or other competent international organizations in order to:
   a) establish appropriate scientific criteria for the formulation and elaboration of international rules and standards as well as recommended practices and procedures to meet the objectives of this Protocol;
   b) formulate and elaborate internationally recommended rules, standards, practices and procedures;
   c) formulate and adopt guidelines in compliance with international practices and procedures to ensure the implementation of safety measures.

2. The Contracting Parties shall seek to harmonize as soon as possible their legislation and regulations with the recommended international rules, standards, practices and procedures referred to in paragraph 1 of this article.

3. The Contracting Parties shall endeavour to the extent possible to exchange information about their policies, legislation and national regulations in this field and ensure the harmonization referred to in paragraph 2 of this article.

Art 26: Mutual Information Sharing

The Contracting Parties shall inform one another directly or through the Organization on measures taken, achievements and where applicable, difficulties encountered in the implementation of this Protocol. The Parties shall determine during their meetings the procedures for the collection, timely and effective reporting and dissemination of information.

Art 27: Transboundary effects

1. Any Contracting Party that becomes aware of any situation in which the marine and coastal environment is in imminent danger of being damaged or has been damaged by marine pollution in the Protocol Area shall immediately notify any other Contracting Party and the regional or sub-regional emergency centre, and provide them with timely information so they can take appropriate measures.

2. Where pollution originates in the territory of a State that is not a Contracting Party to this Protocol, the Contracting Party affected shall seek to cooperate with the said State to ensure the application of this Protocol.

Art 28: Liability and compensation

1. The Contracting Parties shall cooperate directly or through the Organization, in order to develop and adopt appropriate rules, and procedures, as well as guidelines in accordance with international practices and procedures defined in Annex VIII regarding the assigning of liability and fast, adequate reparation or compensation for damage resulting from activities in the Protocol Area, pursuant to Article 15 of the Convention.

2. Pending development of such procedures and guidelines, each Contracting Party shall:
   a) Take all necessary measures to ensure that operators are liable for damage caused by their activities and are required to pay prompt and proportionally adequate compensation;
   b) Take all necessary measures to ensure that operators are and remain covered by insurance or other adequate financial guarantees, whose nature and conditions shall be specified by the Contracting Party so as to ensure compensation for damage caused by activities covered by this Protocol.

Part VI: Institutional and Financial Arrangements

Art 29: Designation of competent authorities

1. The Contracting Parties shall designate one or more national competent authorities to:
   a) Grant, renew and register the permits referred to in Part II of this Protocol;
b) Issue and register the special and general authorizations referred to in Article 10 of this Protocol;

c) Issue the permits stipulated in Annex V to this Protocol;

d) Approve treatment systems and certify sewage treatment plants, as per Article 12, paragraph 1, of this Protocol;

e) Give prior approval for exceptional discharges referred to in Article 16, paragraph 1 sub a and b) of this Protocol;

f) Perform all obligations related to the safety and security measures referred to in Article 17 and Annex VI to this Protocol;

g) Implement the emergency response plans described in Article 18 and Annex VII to this Protocol;

h) Establish the continuous monitoring procedures referred to in Article 21 of this Protocol;

i) Monitor the decommissioning of facilities referred to in Article 22 of this Protocol.

2. The Contracting Parties shall designate a national focal point, if possible the same as for the Convention, responsible for coordinating national efforts to implement this Protocol and to liaise between the Contracting Party and the secretariat of the Convention on technical and programmatic issues.

3. The Contracting Parties shall guarantee at all times the independence and objectivity of the Competent Authority in the conduct of its regulatory functions.

**Art 30: Secretariat and coordination mechanisms**

1. In accordance with Article 17 of the Convention, the Contracting Parties shall appoint the Organization to ensure that the secretariat performs the following functions:

   a. Convene and coordinate the meetings of Contracting Parties,

   b. Assist in raising funds for the implementation of this Protocol,

   c. Provide guidance and assistance to the focal points, national research institutes and all committees, working groups or special teams set up under this Protocol or at meetings of the Contracting Parties,

   d. Provide guidance on the development of the procedures and mechanisms needed to assess and promote compliance and effective implementation of the Protocol, in particular the establishment of national, sub-regional and regional databases on the measures adopted for the implementation of this Protocol,

   e. Provide assistance and advice in the development of common guidelines, standards and criteria established in this Protocol,

   f. Coordinate the development of models for reporting, information-sharing systems and networks and other communication mechanisms to facilitate the implementation of this Protocol,

   g. Coordinate the development and implementation of educational, training, and outreach programs as well as public participation in environmental matters,

   h. Establish and make available to the Contracting Parties and any other interested parties the reports and studies required for the implementation of this Protocol,

   i. Prepare reports of meetings of the Contracting Parties, including those regarding the budget and the audited operating accounts for the periods agreed upon by the meetings
of the Contracting Parties,

j. Conclude the administrative and financial arrangements necessary for the proper performance of the tasks of the secretariat within the framework of this Protocol,

k. Assist the Contracting Parties, in cooperation with regional, international, intergovernmental and non-governmental organizations, to establish and administer programmes and activities to reduce the negative impacts of offshore oil and gas activities in the Protocol Area,

l. Perform all other tasks listed in Article 17 of the Convention

m. Perform any other tasks assigned to it by the Contracting Parties.

2. In accordance with Article 22 of the Abidjan Convention, the Contracting Parties shall transmit to the Organization periodic reports on measures adopted in the implementation of this Protocol. The form and frequency of these reports shall be determined at meetings of the Contracting Parties. The national focal points shall be kept informed by the focal points of this Protocol if they are not the same, and shall coordinate the activities at the national level as well as the delivery of the periodic national reports required under this article. The Organization shall ensure the distribution of reports received in compliance with this paragraph to all Contracting Parties.

Art 31: Meetings

1. Regular meetings of the Contracting Parties to this Protocol shall be held at the ordinary meetings of the Contracting Parties to the Convention, convened pursuant to Article 17 of the Convention. The Contracting Parties may also hold extraordinary meetings in conformity with Article 17, paragraph 1.

2. Ordinary meetings of the Contracting Parties to this Protocol shall be aimed particularly at:

   a) Ensuring the application of the Protocol and reviewing the effectiveness of measures adopted;
   
   b) Revising and amending any annex to this Protocol, in accordance with Article 20 of the Convention;
   
   c) Adopting the guidelines referred to in Article 9, paragraph 2 and Article 24 paragraph 1 (c) of this Protocol;
   
   d) Performing all other functions listed in Article 17 of the Convention.

Art 32: Funding Mechanisms

1. The Contracting Parties, considering the need to ensure adequate financial resources for the implementation of the Protocol, shall provide and mobilize additional funds and other forms of assistance for activities related to the Protocol. These funds and assistance may include voluntary contributions, grants and concessional loans provided by national and international sources, donor agencies, non-governmental, bilateral and multilateral funding sources, individuals and private sector entities, in addition to contributions and statutory obligations referred to in Article 29 of the Convention.

2. The Contracting Parties shall encourage and facilitate the mobilization of adequate and predictable financial resources, including through national budgetary allocations or specific funds such as the environmental levy, operators’ contributions or voluntary contributions, for the implementation of this Protocol.

Part VII: Final Provisions

Art 33: Sanctions

The Contracting Parties shall lay down rules on penalties applicable to infringements of the obligations under this Protocol and the national legislation implementing this Protocol and shall take all necessary
measures to ensure that they are applied.

Art 34: Dispute settlement

1. Should there be a dispute between Contracting Parties about the interpretation or application of this Protocol, they shall seek a solution by negotiation or any other peaceful means of their choice.
2. Should the parties concerned be unable settle the dispute by the means mentioned in the preceding paragraph, the dispute shall be referred to arbitration under the conditions set by the Contracting Parties to this Protocol.

Art 35: Relationship to the Convention

1. The provisions of the Convention relating to any protocol shall apply, mutatis mutandis, to this Protocol.
2. The rules of procedure and financial rules adopted pursuant to Article 29 of the Convention shall apply with respect to this Protocol, unless the Parties to this Protocol agree otherwise.

Art 36: Relations with third parties

The Contracting Parties may invite other non-State parties to this Protocol and international organizations, intergovernmental and non-governmental organizations to cooperate in the implementation of this Protocol.

Each Contracting Party shall adopt appropriate measures compliant with international law to ensure that no one engages within its national jurisdiction in activities contrary to the objectives, principles and purposes of this Protocol.

Article 37: Final clauses

1. This Protocol shall be open in Abidjan on Côte d’Ivoire for signature by the Contracting Parties to the Convention.
2. The provisions of Articles 33 and 34 of the Convention on ratification, acceptance, approval and accession shall apply mutatis mutandis to this Protocol and its Annexes.
3. The provisions of Articles 35, 36 and 37 of the Convention on the entry into force, denunciation and the depository’s responsibilities shall apply mutatis mutandis to this Protocol and its Annexes.

IN WITNESS WHEREOF, the representatives of the Contracting Parties to the Conference of Plenipotentiaries have signed the present Final Act.

DONE at Abidjan this second day of July, two thousand and nineteen, in two languages of English and French, both texts being equally authentic. The two original texts of the protocol as well as the final act shall be deposited with the Depository in the city of Abidjan in Côte d’Ivoire.
ANNEX I: List of Harmful or Noxious Substances and Materials prohibited from disposal in the Protocol Area

A. The following substances and materials, and compounds derived therefrom are listed for the purposes of Article 10 (4 and 8). They have been selected mainly on the basis of their toxicity, persistence and bioaccumulation:

1. Mercury and mercury compounds
2. Cadmium and cadmium compounds
3. Organotin compounds and substances which may form such compounds in the marine environment
4. Organophosphorus compounds and substances which may form such compounds in the marine environment
5. Organochalogen compounds and substances which may form such compounds in the marine environment
6. Crude oil, fuel oil, oily sludge, used lubricating oils and refined products
7. Persistent synthetic materials that may float, sink or remain in suspension and which may interfere with any legitimate use of the sea
8. Substances having proven carcinogenic, teratogenic or mutagenic properties in or through the marine environment
9. Radioactive substances, including their wastes, if their discharges do not comply with the principles of radiation protection as defined by the competent organizations, taking into account the protection of the marine environment

B. The present Annex shall not apply to discharges that contain substances listed in Part A of this Annex that are below the limits defined by the Competent Authority.

\footnote{Except for those which are biologically harmless or which are rapidly converted into biologically harmless substances.}
ANNEX II A: List of Harmful or Noxious Substances and Materials Requiring Special Authorization for Disposal in the Protocol Area

A. The following substances and materials, and compounds thereof have been selected for the purpose of Article 10 (5, 6, 7 and 8):

1. Arsenic
2. Lead
3. Copper
4. Zinc
5. Beryllium
6. Nickel
7. Vanadium
8. Chromium
10. Selenium
11. Antimony
12. Molybdenum
13. Titanium
14. Tin
15. Barium (other than barium sulphate)
16. Boron
17. Uranium
18. Cobalt
19. Thallium
20. Tellurium
21. Silver
22. Cyanides

B. The control and strict limitation of the discharge of substances referred to in Part A of this Annex must be implemented in accordance with Annex III.
Annex II B: Ecotoxicological Testing and Categorization of Chemicals

A. Ecotoxicological Testing of Chemicals

Ecotoxicological documentation in the form of OSPAR Harmonised Offshore Chemical Notification Format (HOCNF) shall exist for all chemicals used in the Protocol Area. This requirement does not apply to lubricants that are used in small amounts and chemicals in closed systems that are used in small amounts. The requirement also does not apply to laboratory chemicals, dispersants and beach-cleaning agents used to combat oil spills, and to new chemicals during the period of field-testing.

Only parts 1 and 3 of the HOCNF must be completed for substances on the OSPAR List of Substances / Preparations Used and Discharged Offshore which are Considered to Pose Little or No Risk to the Environment (the PLONOR list) when reporting to the Organization.

Chemicals shall be tested for the following ecotoxicological properties:

i. Biodegradability
   a. Chemicals that consist of several substances shall be tested for the individual organic substances’ biodegradability. The substances shall preferably be tested in accordance with the seawater test OECD 306 “Biodegradability in Seawater”. If this test is not applicable for the substance to be tested, one of the following seawater tests shall be performed:
      i. Marine CO2 Evolution test (mod. Sturm), modified OECD 301B
      ii. Marine BODIS test (for insoluble substances), modified ISO/TC 147/SC 5 N141
      iii. Marine CO2 Headspace test, modified ISO/TC 147/SC 5/WG 4 N182 for substances known to be toxic to microorganisms (for example, biocides). The Competent Authority must be contacted if alternative tests are planned to be used.
      iv. For substances with moderate biodegradability (equivalent to BOD26 from 20 to 60%) the properties of the degradation products shall also be evaluated.

ii. Bioaccumulation
   a. Chemicals that consist of several substances shall be tested for the individual organic substances’ bioaccumulation potential. This requirement applies to substances with a molecular weight below 700 g/mol. The substances shall be tested according to OECD 117 “Partition Coefficient (n-octanol/water), High Performance Liquid Chromatography (HPLC) Method” or OECD 107 “Partition Coefficient (n-octanol/water); Shake Flask Method”. For substances where standardized tests are not applicable, as for surfactants, a calculation or a scientific evaluation of the bioaccumulation potential shall be performed. Scientific evaluations shall be documented and preferably be performed by an independent party.

iii. Toxicity
   a. Acutely toxic inorganic and organic chemicals shall be tested for acute toxicity. The requirement does not apply to substances/preparations on OSPAR’s PLONOR list. The following toxicity tests are required:
      i. Skeletonema costatum, ISO/DIS 10253:1995
      ii. Acartia tonsa, ISO 14669:1999
ii. Scophtalamus maximus; Part B in the OSPAR Protocols on Methods for the testing of Chemicals Used in the Offshore Industry, 1995. Sheephead minnow is accepted as an alternative species.

iii. Corophium volutator; Part A in the OSPAR Protocols on Methods for the Testing of Chemicals Used in the Offshore Industry, 1995, required if the chemicals absorb to particles (Koc > 1000) and/or sink and end up in the sediments (for example, surfactants)

b. Toxicity testing of fresh water organisms can be accepted if results from marine tests are not available, and they have been performed according to standardised methods. Organic substances that are not very prone to degrade (BOD < 20% over 28 days) shall be tested for acute toxicity at substance level. Toxicity tests, including fish tests, shall be performed at substance level for all chemicals. Fish tests are not required if the chemical is inorganic and has a toxicity to the other test organisms of EC50 or LC50< 1 mg/l organic and a toxicity to the other test organisms of EC50 or LC50< 10 mg/l.

B. Categorization of Chemicals

Substances shall be categorized as follows:

1) Black category: The black category consists of chemicals on the following lists:
   a. OSPAR List of Chemicals for Priority Action, ref. OSPAR Strategy with regard to Hazardous Substances
   b. In addition, substances with the following ecotoxicological properties are categorized as black:
      i. Substances that have both a low biodegradability (BOD28 <20%) and a high bioaccumulation potential (log Pow >5)
      ii. Substances that have both a low biodegradability (BOD28<20%) and high acute toxicity (EC50 or LC50<10 mg/l)
      iii. Substances that are detrimental in a mutagenic or reproductive way

2) Red category: Red category consists of substances with the following ecotoxicological properties:
   a. Inorganic substances which are acutely toxic (EC50 or LC50< 1 mg/l)
   b. Organic substances with a low biodegradability (BOD28<20%)
   c. Substances that meet two of the three following criteria:
      i. Biodegradability equivalent to BOD28<60%
      ii. Bioaccumulation potential equivalent to log Pow>3 and molecular weight < 700 or
      iii. Acute toxicity of EC50 or LC50<10 mg/l

3) Yellow category: Yellow category consists of substances that from their ecotoxicological properties shall not be categorized as red or black, and that are not defined as PLONOR substances

4) Green category: Green category consists of substances on the OSPAR PLONOR list

C: The above testing protocols are without prejudice to existing ecotoxicological protocols of national competent authorities of the contracting parties, especially if more stringent.
ANNEX II: Discharge Standards for Oily Mixtures, Drilling Fluids and Cuttings

This Annex is in reference to the standard to be adopted under Article 11, 12 and 13

</table>
| Workover fluids | No discharge to sea except:  
|----------------|----------------------------------|
|                | • Maximum one-day oil and grease discharge should not exceed 40mg/L; 30-day average should not exceed 29 mg/L.  
|                | • Neutralize to attain a pH of 6 or more.  

| Hydrotreat water | a. Send to shore for treatment and disposal  
|-----------------|------------------------------------------|
|                 | b. Discharge offshore only following:  
|                 |   i. environmental risk analysis,  
|                 |   ii. careful selection of chemicals and  
|                 |   iii. not less than 20m water depth  
|                 | c. Reduce use of chemicals  

| Cooling Water | The effluent should result in a temperature increase of no more than 3°C at edge of the zone where initial mixing and dilution take place. Where the zone is not defined, use 100 m from point of discharge.  

| Desalination Brine | Mix with other discharge waste water streams if feasible.  

| Sewage | • Discharge at more than 3 nautical miles from the nearest land, or sewage that is not comminuted or disinfected at more than 12 nautical miles from the nearest land.  
|--------|----------------------------------------|
|        | • No visible floating solids or cause of discoloration of the surrounding water.  
|        | • Sewage that has been stored in holding tanks shall not be discharged at sea but shipped to shore  

| Deck Drainage (non-hazardous and hazardous drains) | Oil content of the effluent without dilution shall not exceed 15 mg/l  

| Storage displacement water | Oil content of the effluent without dilution shall not exceed 15 mg/l  

| Bilge water | Oil content of the effluent without dilution shall not exceed 15 mg/l  

| Produced Sand | Ship-to-shore or re-inject.  
|---------------|------------------------------|
|               | No discharge to sea except when oil concentration is not more than 1% of weight on dry sand.  

| Food waste | • Discharge to sea after passing through a comminuter or grinder  
|           | • Such comminuted or ground food wastes shall be able to pass through a screen with openings no greater than 25 millimetres.  
|           | • Discharge at more than 12 nautical miles from land.  

Notes:  

a. 96-hr LC50: Concentration in parts per million (ppm) or percent of the Suspended Particulate Phase (SPP) from a sample that is lethal to 50 percent of the test organism exposed to that concentration for a continuous period of 96 hours.  

b. In near-shore waters, carefully select the discharge location based on environmental sensitivities and the assimilative capacity of receiving waters.
Annex IV: Environmental Assessments

We have agreed on the following areas:

A. Legislation and Competent National Authority
1. The legislation of each Contracting Party should mandate a Competent National Authority (CNA) (or authorities) to undertake the Environmental and Social Assessment (ESA) process for all phases from exploration to production and decommissioning, including for appeals.

2. Such authorities should have adequate capacity or alternate arrangements need to be in place while their capacity is being enhanced. The time-lines for each step towards authorisation, including environmental and social assessments, should be reasonable in the context of work to be done by all involved in the process and the capacity of the CNA. In this context, we also note that the ESA process can require different levels of scope and detail, and could include strategic environmental assessments (SEAs).

3. The legislation and its application by each Contracting Party, insofar as it provides for licensing and permitting of oil and gas exploration and production, as well as the social and economic assessments to be undertaken, should as far as possible be aligned with the objectives and provisions of this Protocol, thus ensuring that authorizations have largely the same minimum requirements in the EEZs of the Contracting Parties.

Communication and Transparency
4. Adequate prior communication followed by transparent public participation should be provided as part of the Environmental and Social Assessment process so that other stakeholders and members of the public can provide inputs before decisions are made by the competent authority.

5. Decisions should be communicated openly and Records of Decision (ROD's) made available to the public and other stakeholders. There also should be provision for an appeal process, setting out the grounds on which decisions may be appealed as well as the requirements for lodging an appeal.

6. Events negatively impacting the environment shall be dealt with in a transparent manner.

Functional Capacity
7. As part of the EA process, applicants should be able to demonstrate their technical expertise and access to adequate financial resources.

8. There shall be adequate controls and monitoring mechanisms for the CNA to ensure compliance with permit conditions.

B: The Objectives and Requirements of Environmental Assessments

The objectives of any Environmental and Social Assessment shall be to establish before a decision is taken by any person or authority to undertake or authorise the undertaking of any activity that may to a significant extent affect the environment, that the environmental (including social, health, fisheries) effects of those activities shall first be considered.

1. In this regard an environmental assessment shall include at least the following minimum matters, noting that the EA process can require different levels of scope and detail, and could include strategic environmental assessments (SEAs).
   (a) A general description of the proposed activities; including an indication of the nature, aims, scope and duration of the proposed activities;
   (b) A description of the potential affected environment, including specific information necessary to identify and assess the environmental effects of the proposed activities; this should include a description of the geographical boundaries of the area within which the activities are to be carried out, including sensitive areas and safety areas where applicable, and a description of the initial state of the environment of the area;
   (c) A description of the social structures and economic activities likely to be affected, including specific information necessary to identify and assess the effects of the proposed activities; this should include a description of the potentially affected communities and current economic
activities by sector, including socio-economically vulnerable communities and activities where applicable; and a description of the current state of social structures and economic activities in the area;
(d) A detailed description of the proposed practical activities, as appropriate, including a description of the methods, installations and other means to be used, and possible alternatives to such methods and means.
(e) An assessment of the likely or potential environmental and socio-economic impacts of the proposed activity and the alternatives, including the direct or indirect cumulative, short-term and long-term effects;
(f) A statement setting out the measures proposed for reducing to a minimum the risk of damage to the environment resulting from carrying out the proposed activities, including possible alternatives to such measures; and assessment of the effectiveness, limitations and potential consequences of those measures; a reference to the methodology used for the environmental impact assessment;
(g) A statement setting out the potential social and economic benefits, which should be realistic and include not only various socio-economic benefits, but also the stakeholders who are likely to benefit in various ways;
(h) A list of ecosystem services that were in the EA’s terms of reference; including identification of priority ecosystem services considered and stakeholders engaged in the EA process; assessment of project impacts and dependencies on priority ecosystem services; and measures to mitigate project impacts and management of project dependencies on priority ecosystem services included in the environmental and social management plans.
(i) Proposals or plans to be developed to monitor potential environmental and social impact and proposed mitigating measures, and an indication of the measures to be taken for the protection of the environment from pollution and other adverse effects during and after the proposed activities;
(k) An indication of gaps in knowledge and uncertainty which may be encountered in computing the required information, as well as an indication of potential hazards that may pose future risks;
(l) An indication of whether the environment in any areas outside the EEZ of the Contracting Party but within the EEZ of another Contracting or Non-Contracting Party is likely to be affected by the proposed activity or its alternatives;
(m) A brief, non-technical summary of the information provided under paragraphs (a) to (l) of this section.

2. The environmental effects in an environmental assessment shall be assessed with a degree of detail proportionate to their likely environmental and socio-economic significance. Thus, assessments should focus on core potential problem areas in the context of the proposed activities and their potential impact on the environment, socio-economic activities and communities.

3. Before the CNA gives a decision on an activity for which an environmental (including social, health and fisheries) impact assessment has been conducted, the CNA shall give opportunity to government agencies, members of the public, experts in any relevant discipline and interest groups to comment on the environmental impact assessment of the activity.

C: Applicability and Specific Requirements
(1) The following listed activities comprise a minimum list of activities that will trigger the requirement for the ESA process in the offshore oil and gas sector. They include:
   (a) Seismic surveys
   (b) Drilling
   (c) Oil and gas fields development.
   (d) Construction of offshore pipelines
   (e) Decommissioning

(2) However, an ESA shall not be required in instances of national emergencies, routine maintenance and in some instances of upgrading of facilities (less than 10% change).
(3). The Competent National Authority (CNA) shall require that geo-referenced (position) data collected during the EA study be submitted to the CNA in an acceptable electronic format.

D: General considerations

1. The Convention shall develop a regional guideline or guidance for EIA practitioners on undertaking environmental and social impact assessments in the Convention Area.
2. The licenses and permit regimes for exploration and production activities should be clearly set out so that applicants for authorisations, the public and other stakeholders have a common understanding of these processes or procedures.
Annex V: Requirements for Issuing Permits

The exploration and exploitation permits shall be issued only by the Competent National Authority in accordance with national and international norms and standards, such as the IFC/World Bank Guidelines and, in general, internationally accepted best practices.

A. Authorizations for the exploration and exploitation phases

For the issuance of authorizations in the form of permits as per Part II Articles 6, 7 and 8 of the Protocol, the following factors in particular shall, as appropriate, be considered:

1) Exploration phase: Characteristics and composition of likely air emissions, discharges, waste, noise pollution / pollution and spills:
   a. The main sources of air emissions, including emissions of greenhouse gases and fugitive emissions (continuous and intermittent);
   b. Waste water discharges, including hydrostatic tests, coolant water and other waste water (origin of average composition);
   c. Identification of the types of waste (solid, liquid, sludge, gas) and their estimated quantities;
   d. Types and magnitudes of seismic surveys;
   e. Types and levels of high-frequency noise produced by the air ducts and other sources of acoustic energy;
   f. Nature and importance of discharges from exploration operations (seismic vessels, service vessels, pipelines or other installation).

2) Exploitation phase
   a. Type and size of waste source (e.g. industrial process);
   b. Type of waste (origin of average composition);
   c. Waste form (solid, liquid, sludge, gas);
   d. Total amount (volume discharges): Quarterly evaluation of waste generated;
   e. Discharge pattern (continuous, intermittent, seasonally variable, etc.);
   f. Concentration of major constituents, substances listed in Annex I, substances listed in Annex II and other substances as appropriate (to ensure this point is binding);
   g. Physical, chemical and biochemical properties of the waste.
B. Characteristics of Waste Constituents, Emissions, Discharges, Noise pollution and Discharges
   a. Persistence (physical, chemical, biological) in the receiving environment
   b. Toxicity and other noxious effects (morbidity, CMR: carcinogenic, mutagenic, harmful to reproduction);
   c. Accumulation in biological materials and/or sediment;
   d. Biochemical transformation producing harmful compounds;
   e. Adverse effects on the content and balance of the environment, including oxygen and others);
   f. Susceptibility to physical, chemical and biochemical transformations and interaction in the aquatic environment with other constituents of the sea water likely to produce biological or other harmful effects from the point of view of the uses listed in Section E below.

C. Characteristics of discharge area and receiving marine and coastal environment
   a. Hydrographic, meteorological, geological and topographical characteristics of the marine and coastal zone;
   b. Location and type of discharge (outfall, channel, outlet, etc.);
   c. Initial dilution at the point of discharge into the receiving marine environment;
   d. Characteristics of natural contaminant dispersion, such as effects of the currents, tides and horizontal wind and vertical mixing;
   e. Characteristics of receiving water with respect to physical, chemical, biological and ecological conditions in the discharge area;
   f. Capacity of the receiving marine environment without undesirable effects in the discharged waste.

D. Available Technologies for the Reduction of Waste, Emissions, Discharges, Noise Pollution and Spills
   In selecting waste reduction and discharge methods consideration should be given to the existence and the possibility of implementation of:
   a. Alternative treatment processes;
   b. Reuse or disposal methods;
   c. Alternatives for onshore discharge, where appropriate;
   d. Clean technologies.

E. Potential Impacts on Marine and Coastal Ecosystems and other Rightful Uses of the Sea
   a. Effects on human health due to the pollution impact on:
      - Edible marine and coastal organisms
      - Bathing waters
      - Aesthetics
      - Tourism
b. Effects on marine and coastal ecosystems, in particular living resources, endangered species, vulnerable habitats and generally marine and coastal biodiversity;

c. Effects on other rightful uses of the sea in accordance with international law.
Annex VI: Safety and Security Measures

The Parties shall ensure enforcement of the following provisions pursuant to Article 17:

a) The facility is safe and fit for its intended purpose and, in particular, that it is designed and built to withstand maximum loads of any natural phenomenon, especially the highest force of wind and sea in meteorological record and potential earthquakes, and that it is adapted to both the configuration and stability of the seabed and water depth;

b) All activity phases including storage and transport of recovered resources are well separated, and the whole activity can be controlled by the safety plan and is conducted in the safest way possible and that the operator continuously monitors all his activities;

c) The most advanced safety systems are used and periodically tested to minimize the risk of leaks, spills, accidental discharges, fire, exposure, rash or anything that might endanger the safety of humans or the environment; a specialized team trained to implement and maintain these systems is on site and conducts regular exercises. In the case of licensed facilities without permanent staff, they shall ensure that a dedicated team is always available;

d) The facilities and, if necessary, the established safety zone are marked in accordance with international recommendations so as to be properly signalled with sufficient details and clearly identifiable markings;

e) The facilities are indicated on maps in accordance with international maritime practice and that interested persons are notified their presence;

f) In order to ensure compliance with the above provisions, the person(s) with responsibility for the facilities and activities, including the head of the blowout preventer, have the qualifications required by the competent authority and sufficient qualified personnel are permanently available. Such qualifications should be accompanied, in particular, by ongoing training on safety and the environment.
Annex VII: Emergency Response Plan

A. The operation response plan

1) Operators shall ensure that:
   a. the most suitable alert and communication system is on the facility and in good working order;
   b. the alert is immediately given in the event of emergency and any emergency is immediately reported to the competent authority;
   c. in coordination with the competent authority, the dissemination of alert, and appropriate assistance and coordination of the latter are organized and supervised without delay;
   d. immediate information about the nature and extent of the emergency is given to the team present on the facilities and to the competent authority;
   e. the competent authority is constantly informed about the emergency response developments;
   f. at any time there is enough material and the most suitable equipment, such as ships and aircraft, ready to roll out the emergency response plan;
   g. the specialized team referred to in Annex VI paragraph (c) knows the most appropriate methods and techniques to control leakages, spillages, accidental discharges, fire, explosions, eruptions and any other threat to human life or environment;
   h. The specialized team responsible for reducing and preventing long-term damage to the environment knows the most appropriate methods and techniques;
   i. The team has detailed knowledge of the emergency response plan of the operator, drills are organized so that the team has full mastery of the equipment and procedures and each individual knows his role exactly.

2) The operator shall cooperate within an institutional framework with other operators or entities capable of providing the necessary assistance so as to be sure that such assistance may be delivered should the extent and nature of an emergency create a risk for which assistance is or may be required.

B. National coordination and leadership

(i) Each Contracting Party shall have a National Contingency Plan.

(ii) The competent authority of the Contracting Party shall, in the event of an emergency, ensure:
   a. the coordination of the national emergency response plan and/or response procedures and the operator's emergency response plan, and control the conduct of operations, especially in case of major risks associated with the emergency;
   b. the operator takes any measures deemed relevant to prevent, mitigate or control pollution or to prepare relevant future operations, including sending a back-up drilling rig, or shall prohibit the operator from taking a given initiative;
   c. the coordination of pollution prevention, mitigation and control activities or preparations for future operations to be conducted within the national jurisdiction with
similar businesses within the jurisdiction of other States or to be undertaken by international organizations;

d. the gathering and permanent availability of all necessary information regarding on-going activities;

e. the establishment of an updated list of individuals and organizations to alert and keep informed, in the event of an emergency, of the evolution of the situation and the measures taken;

f. the collection of all information on the scale of an emergency situation, the resources available to address it and the communication of this information to the interested parties;

g. The coordination and supervision of the assistance referred to in (A) below in cooperation with the operator;

h. The organization and coordination, if necessary, of specific actions including the intervention of technical experts and trained personnel with the necessary equipment and materials;

i. The immediate notification, in the event of an emergency, of the competent authorities of other Parties that may be affected by such a situation for them to envisage the appropriate measures;

j. the provision of technical assistance to other Parties where necessary.

k. the immediate notification of the competent international organizations of any emergency so as to avoid navigational hazards and other interests.
Annex VII: Guidelines on Liability and Compensation for Damage resulting from Pollution of the Marine and Coastal Environment in the Area of the Abidjan Convention

A. Purpose of the Guidelines

These Guidelines are intended to implement Article 15 of the Abidjan Convention, under which the Contracting Parties shall cooperate to develop and adopt appropriate rules and procedures for the determination of liability and compensation for damage resulting from pollution of the marine and coastal environment in the Abidjan Convention area.

These Guidelines are also aimed at effective implementation by the Contracting Parties of the "polluter pays" principle, under which the costs of pollution prevention, control and reduction should be supported by the polluter given its public interest. No subsidiary state liability is provided.

Without being binding, these guidelines are intended to strengthen cooperation between the Contracting Parties for the establishment of a regime of liability and redress for damage resulting from pollution of the marine environment and coastal region in the Abidjan Convention area.

B. Scope of the Guidelines and Relations with other Regimes

The Guidelines shall apply to activities under the Abidjan Convention or any of its Protocols.

The Guidelines shall be subject to global and regional regimes regarding liability and compensation for damage to the marine and coastal environment.

The Guidelines shall not affect the issues of State liability in respect of wrongdoing internationally.

C. Geographical Coverage

These Guidelines shall apply to the Abidjan Convention area as defined in Article I of the Abidjan Convention.

D. Implementation

Legislation

1. The legislation of the Contracting Parties should include provisions to compensate both traditional damage and environmental damage resulting from pollution of the marine and coastal environment.
2. For the purposes of these Guidelines, "traditional damage" shall mean:
   a. Loss of life or personal injury;
   b. Loss of, or damage to, property other than property held by the person liable;
   c. Loss of profit as a direct consequence of harm to a legally protected interest in connection with the use of the marine environment for economic purposes, induced by an impairment of the environment, given the savings and costs;
   d. Any loss or damage caused by preventive measures to avoid the damage referred to in paragraphs a), b) and c).
3. For the purposes of these Guidelines, "environmental damage" means a measurable loss to a natural resource or measurable harm caused to a natural resource service which may occur directly or indirectly. The remedy for an environmental damage should include, as appropriate:
   a. The cost of activities and studies in assessing the damage;
   b. The cost of preventive measures, including measures taken to prevent a threat of injury or aggravation of damage;
c. The cost of measures taken or to be taken to clean, restore and rehabilitate the impaired environment;

d. The decreased value of natural resources until their rehabilitation;

e. Restoration by equivalents when the rehabilitation of the impaired environment is not possible.

4. To assess the extent of environmental damage, all available sources of information on the initial state of the environment should be considered, including the national, sub-regional, and regional baseline budgets of international emissions / discharges of pollutants.

5. The measures in paragraph 11 b) and c) should be reasonable, that is to say, they should be relevant, applicable, proportionate and based on actual objective criteria and information.

6. When compensation is granted for the damage referred to in paragraph 11 d) and e), it should be assigned to an environmental intervention in the area of the Abidjan Convention.

7. The Contracting Parties should require that the measures referred to in paragraph 11 b) and c) are taken by the operator. If the operator does not take such measures or cannot be identified or is not liable under these Guidelines, the Contracting Parties should themselves take such measures and charge the operator where applicable.

Liability

8. Liability for damage covered by these Guidelines should rest with the operator.

9. For purposes of these Guidelines, “operator” means any natural or legal person, private or public entity, who exercises the control of an activity covered by these Guidelines. This term also applies to any person who, without due authorization, exercises de facto control of an activity under these Guidelines.

10. These Guidelines shall also apply to damage caused by pollution of a diffuse character, where it is possible to establish a causal link between the damage and the activities of different operators. In such cases, the liability is divided between the operators based on an equitable assessment of the damage caused.

11. The basic standard of the liability regime should be strict liability; however, in case of damage from activities not covered by any of the Protocols to the Convention, the Contracting Parties may apply fault-based liability.

12. In accordance with these Guidelines, liability should depend on the establishment of a causal link between the event and the damage.

13. For the purposes of these Guidelines, “Event” means an instantaneous fact, an uninterrupted succession or series of occurrences having the same origin which cause damage or create a serious and imminent risk of harm.

14. The operator should not be liable for damages that it can prove that they were caused by acts or events totally beyond its control, including an act of war, hostilities, civil war, insurrection, an act of terrorism or a natural phenomenon of an exceptional and irresistible character.

15. Where strict liability applies, financial liability limits can be set based on international treaties or applicable national laws.

16. The Contracting Parties should regularly review these limits, taking into account the particular risks the activities under these Guidelines may pose to the marine and coastal environment.

17. The time limits should be established on the basis of a two-tiered system: a minimum period from the time when it was aware of the damage (three years) and a maximum period from the date of the event (thirty years).

Insurance and Oil Damage Compensation Fund

18. The Contracting Parties should take measures to encourage the establishment of a compulsory insurance scheme or other instruments and financial security markets in order to allow operators to cover, through the financial guarantees, their liabilities under these Guidelines, and to require actual commitment.

19. The Contracting Parties should study the possibility of setting up a compensation fund in the Abidjan Convention area to provide compensation when the damage exceeds the liability of the operator, when the operator is not known, when it is not able to bear the cost of the damage and is not covered by a financial security, or when the State takes preventive measures in emergency situations and is not reimbursed for the cost of such measures.

20. The Contracting Parties may exclude cases of diffuse pollution from the operations of the Fund.
21. The Fund should be financed, if necessary, by regular contributions from Contracting Parties and the operators.

Access to Information

22. The Contracting Parties should ensure that the competent authorities of their countries make public, as widely as possible, access to information on damage or threats of damage to the environment, as well as redress. The responses to requests for information should be made within specific time limits.

23. The Contracting Parties should identify the public authorities empowered to go to court for compensation for damage to the marine and coastal environment under these Guidelines.

24. The Contracting Parties should determine the appropriate legal means to engage the public, including NGOs, civil society, and local communities, in the field of the marine and coastal environment.

Review Process

25. The Contracting Parties should assess the implementation of these Guidelines within three years from their adoption by the Meeting of the Contracting Parties. Based on that assessment, the meeting of Contracting Parties could decide to develop a legally binding instrument.

Annex III: Report of the Committee on Credentials

The Credentials Committee composed of Côte d’Ivoire, Gabon, Ghana and Nigeria and the Secretariat of the Convention, today, 2 July 2019, has received the Credentials of twelve Contracting Parties to the Abidjan Convention. The following Contracting parties are:

The following Contracting parties are:

1. Republic of Benin,
2. Republic of Côte d’Ivoire,
3. Democratic Republic of Congo,
4. Republic of Gabon,
5. Republic of Gambia,
6. Republic of Ghana
7. Republic of Guinea,
8. Republic of Liberia,
9. Republic of Mauritania,
10. Federal Republic of Nigeria,
11. Republic of Congo,
12. Republic of Senegal,
13. Republic of Sierra Leone and

After verifications, ten Parties have the proper authority to sign in accordance with Articles 19 and 20 of the Rules of Procedure. However, four Parties have indeed presented their powers, these instruments do not expressly mention the power to sign.

Consequently, the Audit Committee recommends that the representatives of these four Parties sign each of the Additional Protocols to the Abidjan Convention, namely:

1) Additional Protocol on pollution from land-based sources and activities -LBSA-
2) Additional Protocol on environmental standards and guidelines for offshore oil and gas activities -Oil & Gas-
3) Additional Protocol on integrated coastal zone management -ICZM-
4) Additional Protocol on sustainable mangrove management -Mangroves-
